1 Overview

ADL200 single phase electric meter is designed for single phase active energy measurement on low voltage system, in the same time it can measure the electrical parameters like voltage, current, power and so on. There is also RS485 can be chosen. This electricity meter has advantages of smaller volume, high precision, good EMC, easily installing etc. All meters meet the related technical requirements of electricity meter in the IEC62053-21, IEC62053-22 standards.

2 Function

Function	Function description	Function provide
Measurement of kWh	Single-phase active kWh (positive and negative)	■
Measurement of electrical parameters	Voltage, Current, Active power, Reactive power, Apparent power, Power factor and Frequency	■
LCD Display	8 bits section LCD display	■
Key programming	3 keys to set parameters like code, address, baud rate, multi-tariff	■
Pulse output	Active energy pulse output	■
Multi-tariff	Date and time 3 months historical energy data frozen storage Adapt 14 time zones, 8 time interval lists, 14 time interval by day and 8 tariff rates	□F
Communication	Communication interface:RS485, Communication protocol: MODBUS-RTU	■

(■：Standard；□：Optional)

3 Technical parameter

3.1 Electric performance

Input voltage	Reference voltage	AC 220V
	Voltage range	AC 75~260V
	Reference frequency	50Hz
	Power consumption	<10VA
Input current	Basic current	10A
	Maximum current	80A
	Starting current	4‰Ib
	Consumption	<4VA
Measurement performance	Accuracy of measuring	1 class
	Range of measuring	000000.00~42949672.95kWh
Clock accuracy		Error≤0.5s/d

Active pulse	Pulse width	80±20ms
	Pulse constant	1000imp/kWh
Communication	Interface	RS485(A+、B-)
	Connection mode	Shielded twisted pair conductors
	Protocol	MODBUS-RTU

3.2 Mechanical performance

| Outline | Length × Width × Height | 90mm×36mm×65mm |
| Strong current terminal Torque | <1.8Nm | |

3.3 Work environment

Temperature range	Work temperature	-25℃~55℃
	Storage Temperature	-40℃~70℃
Relative humidity		≤95%(No condensation)
Altitude		<2000m

4 Outline (unit: mm)
Meter outlook and size

5 wiring and installing

```
        ┌───┬───┐   ┌───┬───┐      ┌────┬────┐   ┌────┬────┐
        │ L │ L'│   │ N │ N'│      │ 21 │ 22 │   │ 17 │ 18 │
        └───┴───┘   └───┴───┘      └────┴────┘   └────┴────┘
  L ──────┘   └──────┘   │            │    │        │    │
  N ───────────────────┘ └─ LOAD      A    B      Active
                                               Pluse
```

Note: Voltage signal wiring torque should be 3-4N·m, RS485, active energy pulse wiring torque should be 0.5N·m.

6 Diagnosis, analysis and elimination of common faults

6.1 Auxiliary power failure

Failure performance: the meter flashes and does not light up after being powered on.

Troubleshooting:

1. Check whether the wiring of the auxiliary power supply is consistent with the wiring diagram of the instrument, and whether the wiring is loose or falling off;

2. Use a multimeter to measure whether the input voltage value of the auxiliary power supply is within the normal working voltage range of the instrument.

6.2 Signal input failure

Failure performance: After the meter is powered on, the display power or energy count is not accurate.

Troubleshooting: Switch the display interface of the meter to the power (active P, power factor λ) interface, check whether the power display is negative and whether the power factor is between 0.8-0.95, and then check whether the input and output of the current signal line are reversed (That is, the incoming line of the current must be consistent with the incoming end of the instrument), And consistent with the wiring on the meter.

6.3 communication failure

Failure performance: After the meter is powered on, it cannot communicate with the host computer normally.

Troubleshooting:

1. The voltage value between the communication output A and B of the measuring instrument should be between +(4.4-4.5)V;

2. Check whether the communication wiring method is correctly wired according to the wiring diagram (that is, the communication terminal A/B of the instrument should correspond to the communication serial port A/B);

7 Operation and display

7.1 Key description

Key icon	Key name	Key function
⟨≫⟩	Key up	View voltage and current in the view interface Up and flashing shift in the programming interface

⌄	Key down	View power in the view interface Scroll down and modify flashing bits in the programming interface
↵	Key setting	View electrical energy in the viewing interface Long press 3S to enter/exit the menu Short press OK in the programming interface to save the settings

7.2 display description

Show total energy when connected. Change information while pressing down key. Display information as following.

|	
⌃	U、I、F、Time、MODBUS Address、Baud、parity、Version、ALL－display;
⌄	Total active power、total reactive power、total apparent power、total power factor;
↵	Total active energy, forward active total energy, reverse active total energy, total active energy at various rates, total reactive energy, forward reactive total energy, reverse total reactive energy, total reactive energy at various rates
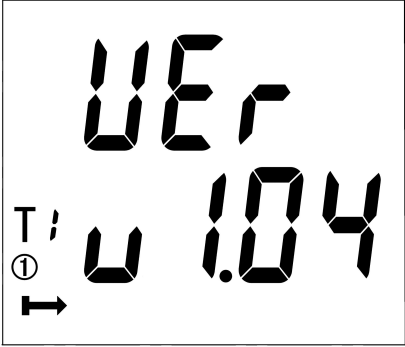

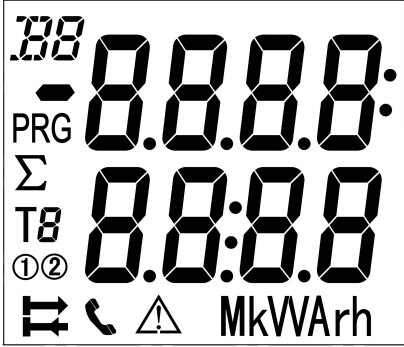

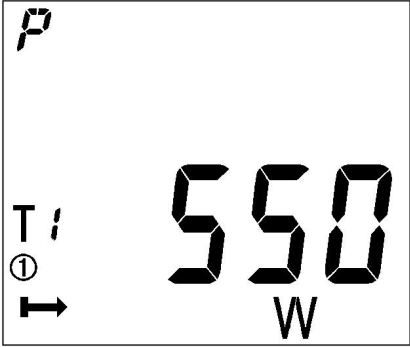

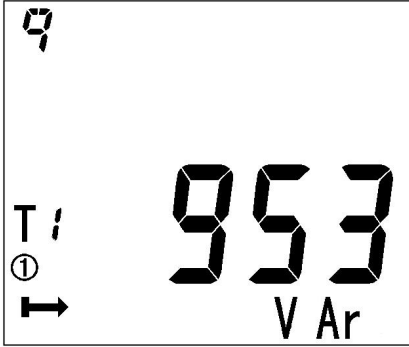

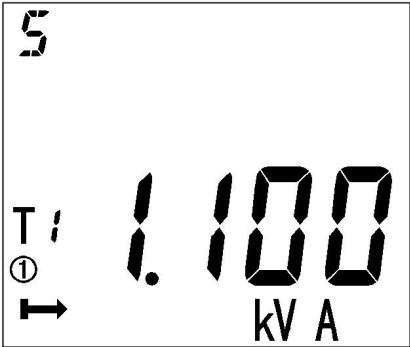

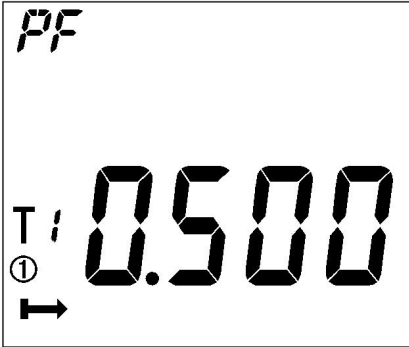

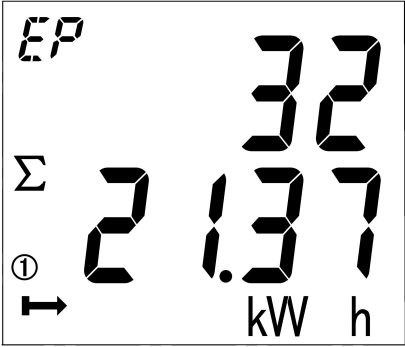

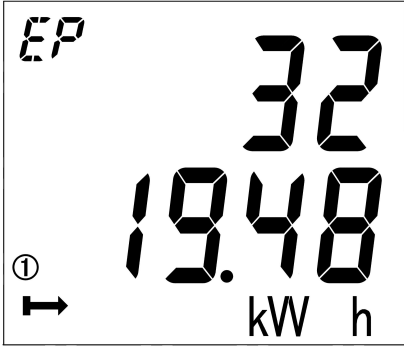

Note：
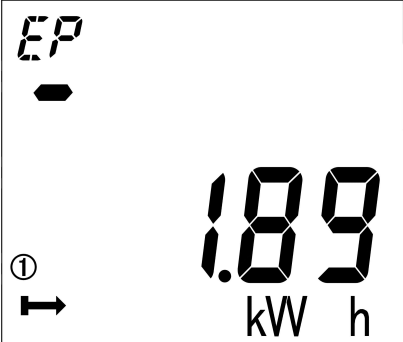

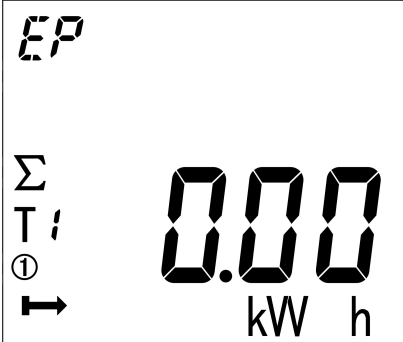

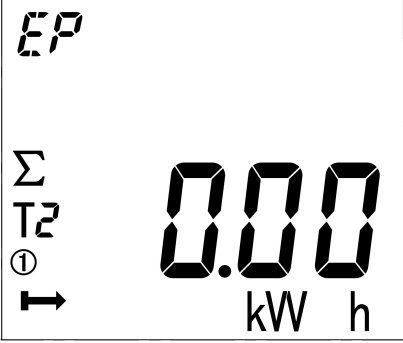

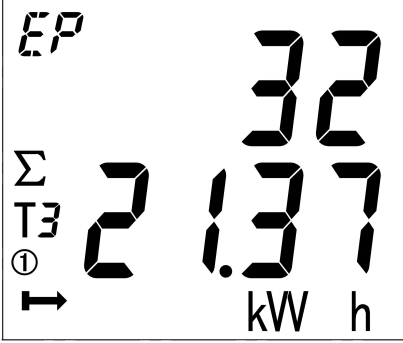

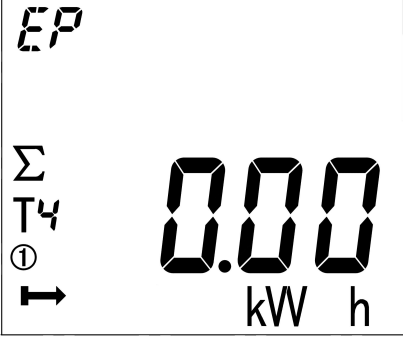

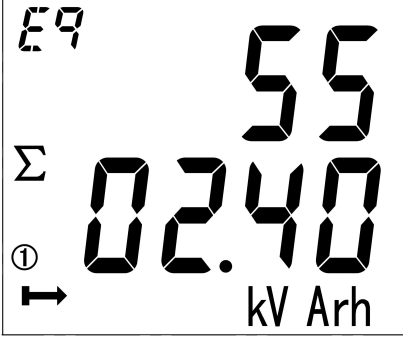

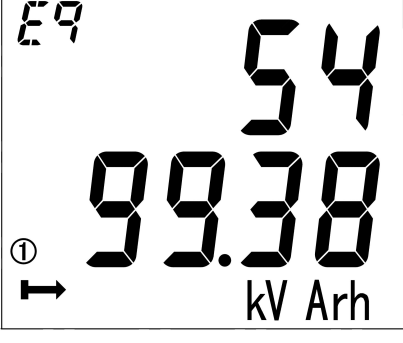

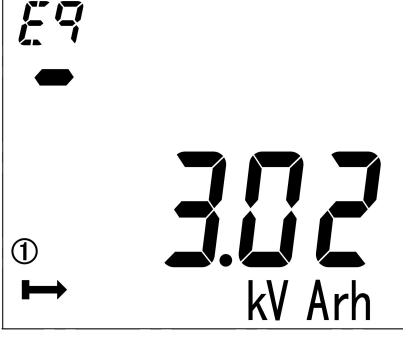

1. Listed above are the names of all display interfaces of the ADL200 meter with multi-tariff function. Three buttons can switch different types of display content, the switching sequence is as described above.

2. For the ADL200 meter without the multi-tariff function, it does not display the date, time and various types of rate energy (the energy in the eight rate periods).

3. The amount of rate energy displayed is determined by the maximum rate of the set time meter, for example, if the maximum rate set is T5 (rate 5), then the meter displays the rate energy 1-5.
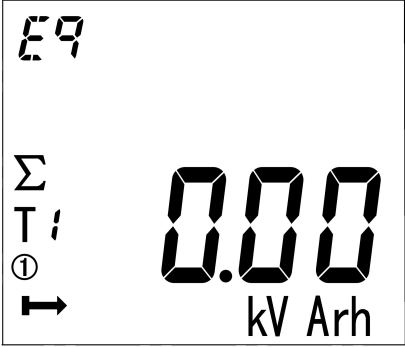

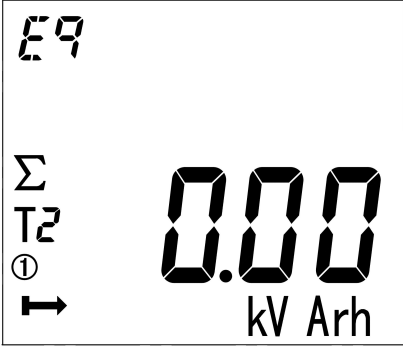

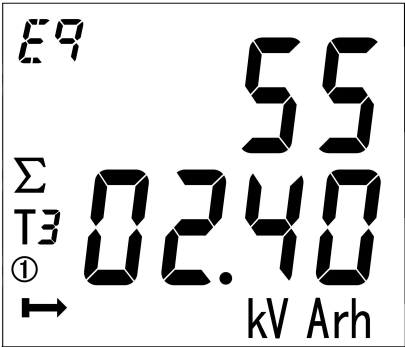

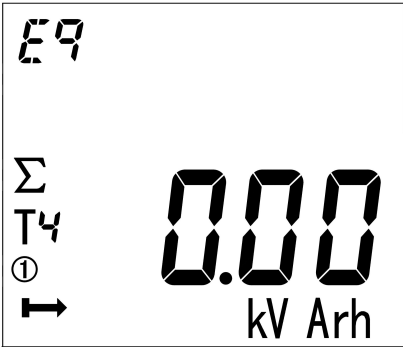

Display interface description

⌃	U T1 ①→ **220.0** V	I T1 ①→ **5.00** A
	Voltage 220.0V	Current 5.00A

F T1 ① 50.00	25 T1 ① 01.30

EP Σ T4 ① ↦ **0.00** kW h	E9 **55** Σ **02.40** ① ↦ kV Arh
Current combined valley active energy	Current total reactive energy(5502.40kvarh)
E9 **54** **99.38** ① ↦ kV Arh	E9 ◆ ① ↦ **3.02** kV Arh
Current forward reactive total energy	Current reversing reactive total energy

$E9$ Σ T1 ① → **0.00** kV Arh	$E9$ Σ T2 ① → **0.00** kV Arh
Current spike reactive energy	Current peak reactive energy
$E9$ Σ T3 ① → **55 02.40** kV Arh	$E9$ Σ T4 ① → **0.00** kV Arh
Current flat reactive energy	Current valley reactive energy

Note:The above shows the interface with multi rate, TX in the lower left corner indicates that the meter is currently running on rate X (except for the energy interface), ① indicates that it is currently running on time list 1, if function F is not selected, there is no such labeling as TX and ①. In addition, the arrow to the right indicates that the meter is upwardly inwardly and downwardly outwardly for the positive power direction.

7.3 Programming display menu

Press ⏎ at any main menu and get in PASS interface, and then press ⏎ show P-0000, and enter the code. If you enter a wrong code, it will show "0000" and enter the code again; and if you enter a right code, you can set the parameter. After setting the parameter, it will show SAvE and save the change by pressing S-YES and quit without save by pressing S-no.
7.4 Configurable data items

Configurable items description

Mum	Secondly menu		
	Symbol	Meaning	Range
1	ADDR	Communication address	1-254
2	Baud	Baud setting	1200、2400、4800、9600、19200、38400
3	Pari	Parity setting	None、Odd、Even
4	LED	Background light setting	0-255 minutes， 0 ever bright
5	S-TY	Apparent power calculation	PQS,RMS
6	EF-E	Set multi-tariff	EF-YES E-NO
7	DIR	Current direction	no-forward yes-reverse
8	CoDE	Code setting	1-9999

8 Communication description

8.1 Communication protocol

The meters adapt Modbus-RTU. Please refer to the relevant standards for more information. The multi-tariff data mean nothing when multi-tariff function (F) is not applied.

8.2 MODBUS Address list

Address	Variable	Length	Attributes	Note
0000H	Current combined total active energy	4	R	UINT32 unit：0.01kWh
